1. medium

- **[code]** Add PatternLayout capability like log4j (http://logging.apache.org/log4j/docs/api/org/apache/log4j/PatternLayout.html). Probably RegEx required, infos see: http://www.regular-expressions.info/javascript.html. # open
- **[design]** Implement log4js.properties feature to configure log4js at central place. Probably the properties-file has to be located at {web-root}/js/log4js.properties? # open
- **[code]** Add JSUnit tests. # open
- **[docs]** Matrix of supported browsers/environments required. Probably someone could help on non-Windows platforms? # open
